

5010 In-Site - SMART DATA SOLUTIONS IS TAKING A DIFFERENT APPROACH TO 5010.

For 10 years Smart Data Solutions has assisted Payers and networks with the ever growing need to comply with new Healthcare industry regulations and requirements. We understand that these unfunded, mandatory system upgrades put a strain on your I.T. resources as well as your bottomline.

That's why Smart Data produced *5010 In-Site* and is taking a different approach to the 5010 and ICD-10 initiatives. So, we'll ask the same question as everyone else...

Is your system ready to take the 5010?
With *5010 In-Site*, it doesn't have to be.

Let's Not Make This Harder Than It Needs To Be

You don't need 3 years of consulting services, and 10 steps to prepare for the 5010 standard. Smart Data's *5010 In-Site* provides a simple one step solution that integrates into your CURRENT workflow.

5010 In-Site provides a cost effective solution that negates the need for expensive platform upgrades and the implementation of unnecessary software. With our state of the art 5010 EDI builder and parser modules; we accept the 5010 standard for you, convert and route back to you in the EDI format desired. Meanwhile your current network routing implementations stay intact.

Preparing for the 5010 doesn't have to be the burden that many are portraying it to be. Never-the-less it's mandatory and something HAS to be done. Take the different approach. Take the In-Site approach.

The In-Siteful Benefits

5010 In-Site offers the following "no" benefits:

No exponential costs for platform/system upgrades.

No additional costs for random converter software upgrades.

No time wasted sifting through pages and pages of 4010 and 5010 comparison documents.

No training requirements, implementation timelines or development effort wasted.

No unnecessary "pathways" to migration
